Key Topics Covered in the 10th Edition of DBMS and Corresponding Answers

The 10th edition of Database Management Systems introduces advanced topics alongside foundational concepts. Here are some core areas with typical questions and solutions:

1. Data Modeling and ER Diagrams

- Question: How to convert an ER diagram into relational schemas?

- Answer: Follow these steps:

- Identify entities and convert each to a table.

- Map relationships:

- For 1:N relationships, add a foreign key in the N-side table.

- For M:N relationships, create a new relation with foreign keys referencing both entities.

- Specify primary keys and constraints.

- Example: Converting an ER diagram with entities Student and Course, with a relationship Enrolled, results in:

- `Student(StudentID, Name, Major)`

- `Course(CourseID, Title, Credits)`

- `Enrolled(StudentID, CourseID, EnrollmentDate)` with foreign keys referencing Student and Course.

2. Normalization and Dependency Theory

- Question: How to normalize a relation from 1NF to BCNF?

- Answer: Use the following process:

- Ensure relation is in 1NF.

- Identify functional dependencies.

- Decompose relations to eliminate anomalies:

- For BCNF, ensure all determinants are candidate keys.

- Repeat until the relation is in BCNF.

- Sample Solution: For relation `R(A, B, C)` with dependencies `A → B` and `B → C`, decompose to

achieve BCNF by creating relations:

- `R1(A, B)`
- `R2(B, C)`

3. SQL Queries and Data Retrieval

- Question: Write an SQL query to find students enrolled in more than three courses.
- Answer:

```
```sql

SELECT EmployeeID, Name, Salary
```

```
FROM Employees
```

```
ORDER BY Salary DESC
```

```
LIMIT 5;
```

```
```
```

4. Transaction Management and Concurrency Control

- Question: Explain how deadlocks are prevented.
- Answer: Deadlocks can be prevented by:
 - Using lock timeout protocols.
 - Ensuring a strict locking order.
 - Using deadlock detection algorithms and rolling back transactions when deadlocks are detected.
 - Applying the wait-die or wound-wait schemes.

5. Indexing and Performance Optimization

- Question: What are the types of indexes, and when should each be used?
- Answer:
 - Single-level Index: Suitable for small tables.
 - Multi-level Index: Used for large tables to speed up searches.
